SUMMARY

Senior Android and Flutter Developer with 4+ years of experience shipping production mobile apps with Kotlin and Flutter/Dart. Currently leading a 4-person Android team on an AI wearable companion app used by nearly 30,000 people, with 99%+ crash-free sessions. Strong in MVVM and Clean Architecture, Kotlin Coroutines, REST APIs, Firebase, and Google Play releases. Experienced in agile, cross-functional teams and in mentoring developers through code reviews.

SKILLS

Languages: Kotlin, Java, Dart, Python, JavaScript, SQL

Android: Android SDK, Jetpack Compose, Kotlin Coroutines, RxJava, Hilt, MVVM, Clean Architecture

Flutter & Cross-Platform: Flutter, Bloc, Riverpod, Provider, GetX, iOS builds (Xcode)

APIs & Backend: REST APIs, JSON, WebSocket, Firebase (Firestore, Realtime Database, Cloud Messaging, Analytics, Crashlytics), Supabase, SQLite, NoSQL

Testing & Delivery: Unit Testing, Widget Testing, CI/CD (GitHub Actions, Codemagic, Bitrise), Git, Code Review, Google Play Console, Agile/Scrum, Jira

AI/ML: PyTorch, Gemini Live API, AI/ML feature integration

Tools: Android Studio, VS Code, Figma, Technical Documentation

EXPERIENCE

[seekr.ai](#)

Senior Android Developer

May 2025 – Present

Remote (Hong Kong)

- Develop native Android (Kotlin) apps for the Seekr AI wearable, part of a platform with **30,000+** users across Hong Kong, Singapore, Japan, and the US ([2026 impact report](#)), with an AI chatbot and real-time detection features; product demos on [YouTube](#).
- Ship Seekr Companion, used daily by **1,271** visually impaired users per the [impact report](#).
- Distribute the apps across [Google Play](#), the [Apple App Store](#), Huawei AppGallery, Tencent MyApp, APKPure, and other APK platforms.
- Maintain **99%+** crash-free sessions across Android releases on every distribution channel.
- Implemented dual network mode to keep the IoT wearable connected without interruption.
- Optimized background architecture for continuous AI-powered environmental analysis and narration, cutting battery consumption by **30–40%**.
- Lead a 4-person Android team, coordinating agile delivery of the Seekr AI wearable app.
- *Technologies:* Kotlin, Coroutines, MVVM, Hilt, Jetpack Compose.

[Neways International Company Limited](#)

Mobile Application Developer

December 2023 – April 2025

Dhaka, Bangladesh

- Launched a hotel management system digitizing bookings and room availability for **10,000+** monthly users, eliminating booking errors.
- Introduced a referral app ([SH-Cash demo](#)) for **25,000+** users, lifting conversions by **60%** through simple referral and earnings management.
- Connected the apps to a secure SQL backend via RESTful APIs for reliable, low-latency data synchronization.
- Delivered iOS and Android from a single Flutter codebase, cutting development time by **40–50%**.
- Led a 6-person mobile development team, coordinating agile sprint delivery across the hotel management and referral apps.
- Built mobile experiences for [Super Home BD](#), Neways' consumer brand serving individual users across Bangladesh.

SoftSnip

June 2023 – November 2023

Application Developer (Contract)

Remote (Australia)

- Created a car rental management web application with Flutter and Firebase for **10,000+** users.
- Integrated Firebase Realtime Database with a responsive UI for real-time data updates.
- Built an admin panel for managing bookings and payments, reducing manual administrative work.

BRAC University

December 2022 – May 2023

Application Developer (Contract)

Dhaka, Bangladesh

- Shipped an [attendance management app](#) for **3,000+** faculty and students.
- Added QR-based attendance and course material sharing, replacing manual tracking and cutting attendance processing time by **80%**.
- Secured user authentication and media storage with Supabase and DigitalOcean.
- Mentored junior developers on Flutter best practices and pull request reviews.

BRAC University

February 2022 – November 2022

Mobile Developer – Auth & Access Control (Contract)

Dhaka, Bangladesh

- Developed a full-stack martial arts club management app, leading a development team from planning through deployment.
- Implemented phone-verified user authentication and role-based access control.
- Designed a responsive UI/UX following Material 3 guidelines for a consistent Android and iOS experience.

EDUCATION

BRAC University

April 2019 – December 2023

Bachelor of Science in Computer Science

Relevant Coursework: Android App Development, Object-Oriented Programming, Data Structures and Algorithms, Software Engineering.

PROJECTS

- Architected [Organization Management Application](#) (2024, personal project), an AI-powered app with automated approvals, role-based dashboards, attendance tracking, and payments. *Technologies: Flutter, Firebase, PyTorch.*
- Released [AI Powered Study Companion](#) (2025), a cross-platform app (Android, iOS, Web, Desktop) with **5,000+** users, featuring spaced-repetition scheduling, class and daily routines, three home-screen widgets, and Pootu, a Gemini Live voice assistant that manages study data over WebSocket. Supabase backend with local notifications. *Technologies: Flutter, GetX, Supabase, Gemini Live.* [Live](#) (demo credentials on request).
- Published [Fit-book](#) (2026), a fitness and nutrition app with **1,300+** exercises and **150+** healthy foods and **2,000+** downloads via Google Play and third-party APK platforms. *Technologies: Flutter, Firebase.* [Live on Google Play](#).

AWARDS & CERTIFICATIONS

- **1st Prize**, Tech Spectra 2.0 – mobile app development competition, awarded for problem-solving and innovation. [Award](#)
- Flutter & Dart – The Complete Guide, Udemy
- **Data Science (IBM)**, Cognitive Class.ai [Certificate](#)
- **SQL and Relational Databases 101 (IBM)**, Cognitive Class.ai [Certificate](#)
